

IIIM-1133

[IIIM-1133/06 - BIOENHANCER LEAD]

- IIIM-1133 a novel piperine derived structure is a multiple bacterial efflux pump inhibitor
- Blocks the emergence of resistance
- A combination of IIIM-1133 with mupirocin exhibits better efficacy than the original mupirocin formulation.
- IP Status: WO 2006/103527, US patent no. 8580752-B-2

End point: A novel formulation of mupirocin as IND candidate aimed at shortening of treatment duration and elimination of emergence of resistance in topical infections.
